

**Integrated Situation**  
**Tuesday, April 22, 2025**  
**L3 SOD**

**Practical assessment**

1. Create a CSS with suitable background properties for a web page that gives some basic information about your city (add some nice photos as well).
2. Create a website that gives basic information about yourself. You should prepare a separate page for each of the following: personal information, academic qualification, professional qualification, job experience, hobbies, and photo gallery. Academic qualification page should display the information about your degrees and certificates along with the subjects you studied in each in a tabular form. Create suitable CSS file and link it with all of your pages.
